ASIA PACIFIC REGION

DOCKWEILER
YOUR PARTNER AND EXPERT FOR HIGH PURITY SOLUTIONS

Specific inner surfaces
for safe installations.
Highest purity down to Ra 5 µin.

Dockweiler quality
from raw material to delivery.
All certificates are available on:
www.dockweiler.com

Consistent 3.1 certificates
with all important information.
End-to-end documentation
and traceability.

Engineered components
for enhanced efficiency.
Weld seams in perfection and
ultimate quality.

ULTRON, ULTRON VIM-VAR

For UHP gas applications in semiconductor industry and fine chemistry

ultron / ultron vimvar

ep

electropolished
cleanroom cleaning and packing

1. SURFACES QUALITIES

Tubes and fittings:	Inner surface (ep)	Outer surface
● ultron	Ra _{avg.} ≤ 10 µin (0.25 µm)	Ra _{avg.} ≤ 40 µin (1.0 µm)
● ultron VIM-VAR	Ra _{avg.} ≤ 7 µin (0.18 µm)	Ra _{avg.} ≤ 40 µin (1.0 µm)
On request:	Ra _{avg.} ≤ 5 µin (0.13 µm) Ra _{avg.} ≤ 7 µin (0.18 µm) Ra _{avg.} ≤ 15 µin (0.38 µm)	

Pipes and pipe fittings:	Inner surface (ep)	Outer surface
● ultron	Ra _{avg.} ≤ 20 µin (0.51 µm)	RA not defined

Additional notes:

- The Ra value in the cold worked area of fittings (inner and outer surface) and on the surface of circumferential welds is not defined. For dimmensions OD ≤ 1/4" (6.35 mm) roughness is not defined.

- Free of oil and grease acc. to CGA G-4.1-2018 and ASTM G93 – level A.

- Cleanroom cleaning and packing (Federal Class 10 / ISO Class 4)

2. MATERIALS

● ultron	1.4404 / UNS S31603 (316L), 1.4435 / UNS S31603 (316L), UNS S31603 (316L)
● ultron Alloy 22	N06022 according to ASTM B622 / B575 / B574 / B829 (1/4" to 1" seamless tubes)
● ultron VIM-VAR	UNS S31603 (316L) VIM-VAR double melted stainless steel

Hardness equivalent to:

- max. 180 HV* according to DIN EN ISO 6507-1

- max. 90 HRB* according to DIN EN ISO 6508-1

* comparable to ASTM E-384 (HV) and ASTM E 18-22 (HRB)

3. DIMMENSIONS

Tubes and fittings:	Imperial according to ASTM A269 / A270 / A632	
OD ¹ x WT:	1/8" x 0.022" to 6" x 0.109"	219.08 x 3.76 mm to 323.9 mm x 4.57 mm
	¹ VIM-VAR only available up to 1"	
Manufacturing process:	Seamless Tubes ≤ 1" OD (25.40 mm)	Welded Tubes ≥ 1 1/2" OD (38.10 mm)

Pipes:	according to ASTM A312	
Dimmensions:	NPS 8, 10, 12 Schedule 10S	Length: min. 19.36 ft to max. 19.98 ft

Manufacturing process:	Welded Tubes
------------------------	--------------

4. QUALITY AND TEST PROCEDURES

Verification of
basic test certificate

Visual inspection

Endoscopic inspection
of bright finished tubes

Verification of
dimmensions

Roughness
measurements

Conductivity test
(DI water)

TOC-measurement
of DI water

Particle measurements

Scanning electron
microscope (SEM)

XPS / ESCA

Auger analysis (AES)

5. TECHNICAL TERMS OF DELIVERY

Tubes and fittings are prepared for orbital welding. Different end preparations may be agrred on.

Tubes and Pipes

According to ASTM A 632 / A 269 / A 270 / A 312 (Pipes), DIN EN 10217-7/ 10216-5 with a length of 19.35 ft - 19.98 ft (5900 - 6090 mm), max. 10% short lengths of min. 9.84 ft (3000 mm). Tubes with an outside diameter of 5.00 mm or smaller are supplied with a length of 2950 mm (+/-50 mm).

Tube fitting components

Manufacturing and tolerances according to DIN11865, ASTM A 403 (Pipes) and ASME B16.9 (Pipes).

Machined components

Prematerial acc. to ASTM A 479, DIN EN 10088-3, DIN 17440, ASTM A 182 (Pipes)

Marking always with

DOCKWEILER / DW-Number / Dimmension / Material / Heat number

Tubes, pipes and fittings are permanently marked. The marking provides all necessary information to trace back the heat number and the material grade.

6. DOCUMENTATION, PACKAGING AND SHIPPING

The documentation result by the Dockweiler Inspection Certificate 3.1 according to DIN EN 10204.

Tubes and fittings filled with N2 (99.999%), closed with PA/ PE squares and yellow PE caps, double-bagged and sealed in PE-sleeves.

Delivery in tubular container or wooden crate, fittings in strong cardboard box with shock absorbing filler.

The batch label on the foil contains the information ultron or ultron vimvar.

SPECIFICATIONS
ULTRON LTP

COAX SYSTEM
DOUBLE WALL TUBE SYSTEM

COAX – The Coaxial Tube System

COAX double wall tube system is a safe solution for transport of explosive, toxic, corrosive, or highly viscous media. COAX tubes and fittings consist of an inner process tube and an outer safety tube. Spacers on the inside ensure safe flow.

Design of the COAX Tube System

- 1 Inner process tube (ultron or TCC)**
For explosive, toxic, aggressive or highly viscous media.
- 2 Outer safety tube (TCC)**
For safety or accumulation as well as for temperature-controlled media for heating or cooling.
- 3 VCR® connector**
The interface of the VCR® connection enables sensory measurements.

CUSTOMIZED SOLUTIONS
FOR MICROELECTRONIC APPLICATIONS

Optimized designs, the purest surfaces, perfected welds

When it comes to implementing complex components and systems Dockweiler is your manufacturing specialist. Maximizing productivity is the primary goal. This requires a highly reliable and efficient solution. The focus here is on low dead space and surface optimization.

**Bubbler /
Container Vessels**

Page 54

**Prefabricated
Laterals**

Page 56

CUSTOMIZED SOLUTIONS
BUBBLER / PROCESS VESSELS

**PROCESS VESSELS (BUBBLER)
FOR ORGANOMETALLIC COMPOUNDS**

Dockweiler process vessels guarantee safety when feeding ultra-pure media to critical manufacturing steps such as metal organic vapor phase epitaxy (MOVPE). In addition they offer a plus in safety due to their absolute tightness (helium leakage rate $\leq 4.0 \times 10^{-9}$ mbar l s⁻¹) and robust design.

HPL SERIES

The Dockweiler HPL series stands out from the competition by offering the most efficient utilization of the medium (e.g. trimethylgallium/TMG) .

Electropolishable orbital welding seams, optimal vessel size and shape and the elimination of dead space ensure the highest level of saturation of the carrier gas.

HPS SERIES

With the patented HPS solids bubbler. Dockweiler has developed a completely new bubbler design.

To ensure continuous saturation of the carrier gas with the filling medium, the HPS bubbler has a patented chamber system through which the flow of carrier gas is channeled.

ECO SERIES

The Dockweiler ECO series offers a variant of the HPL bubbler designed for the evaporation of liquids.

Dockweiler has systematically standardized the components used to offer an inexpensive alternative to the HPL bubbler.

OPTIONS

Dockweiler's HPL and HPS series bubblers can be customized with a wide range of options to create the ideal match for your application.

Valves 1
We use Ham-Let 90° monolever rotating diaphragm valves as standard for our bubblers. Valves from the following manufacturers are also optionally available: Swagelok, Carten Controls, Parker and other valves on request.

Crossover Function 2
The crossover function is a purging option with no dead space for eliminating oxygen from the system (including the inlet and outlet valves) during filling on the chemical manufacturer's premises or while the bubbler is connected to a process. It thus offers a simple, efficient solution for cleaning the gas path.

Level Sensor 3
The level sensor is a signal generator that, together with a fill level indicator, reliably displays the residual amount of organometallic compound in the bubbler. Dockweiler offers an ultrasonic sensor for the bubbler, featuring specified switching points (90%, 70%, 30%, 10%) for signaling the fill level.

Polarized Connectors 4
The standard design features male face seal for both connectors. To prevent confusion when connecting, Dockweiler offers male and female connectors.

TECHNICAL DATA

Application Areas HPL and ECO series for Fluids HPS for Solids	Materials 1.4404, 1.4435, UNS S31603 (316L), UNS N08367 (AL-6XN), UNS N08904 (904L), UNS N06022
Volumes from 0.053 to 14.794 gal US (200 ml to 56 l)	Surface Options • $Ra_{avg} \leq 16 \mu\text{in}$ and $Ra_{avg} \leq 10 \mu\text{in}$ for electropolished version • bright finished, anodical cleaned, electropolished

CUSTOMIZED SOLUTIONS
PREFABRICATED LATERALS

PREFABRICATED LATERALS

Manifolds for utility lines are designed to simplify UHP, CFOS and PCW installations. UHP Manifolds are necked out and then welded, tested and packaged in an ISO 4 / Class 10 cleanroom. The use of prefabricated manifolds reduces the overall installation and acceptance process of the system through faster purge time and reduced particle count.

ELEMENTS IN STAINLESS STEELS
MATERIALS OVERVIEW

Steel is one of the most commonly used alloys and consists mainly of iron. In general the carbon content is less than 2%. It contains also other components that may emerge due to the manufacturing process or are added to obtain certain characteristics.

Stainless steels according to EN 10020 are alloyed and unalloyed steels with a special purity level like for example steels with a sulphur and phosphorous content (a so-called iron companion) that is not higher than 0.025%.

Stainless steels are characterized by an amount of chromium of more than 10.5%. Due to that high chromium content a protective and dense passive layer of chromium oxide establishes on the material surface. The term “stainless steel” is therefore misleading since materials cannot be stainless in any field of application.

The right choice of the convenient material is crucial for its application. A variety of steels and alloys have been developed to counteract against the possible forms of corrosion in the different industry branches. The requirement for a suitable, corrosionResistant use of a material is still the appropriate manufacturing.

Regarding the application it is important to know and to assess besides the material also the process parameter like medium, concentration, time and temperature.
